

Report Diversity in Tech and Product

The technology industry is at a crossroads. Despite the incredible advancements and innovations taking place across the sector, there remains a significant lack of diversity in tech.

It is a well-documented fact that women are consistently underrepresented at all levels, and so the importance of diversity in tech cannot be overstated. A diverse workforce promotes an ecosystem of changemakers, bringing a variety of perspectives, experiences, and ideas to the table, leading to better product development, greater innovation, and increased profitability.

The entire Renovata and Company platform actively encourage our clients and network to take meaningful action to increase diversity and inclusion in their workforce and product development processes.

In this report, we explore the state of diversity in tech, product development, engineering, and the increasing lack of female talent as they progress throughout their career.
